

MR[®] ASTM test block

Order no.: G57-3 L

Application area

Test block for Penetrant Testing acc. to ASTM E165 and ASME Boiler and Pressure Vessel Code with declaration of conformity

Structure

The ASTM test block is made of aluminum. It is divided into two areas (A and B) by a groove.

Application

The test block is intended for testing the display sensitivity of the testing equipment. In area A, the penetrant currently in use is applied, in area B the "fresh" penetrant is applied. By this method a direct comparison is obtained if the batch currently still meets the desired quality and/or fulfills the desired display capability.
